A New Era of Hope for Cerebral Palsy

Researchers continue advancing rehabilitation, regenerative medicine, early diagnosis, AI-assisted therapy, wearable robotics, and brain-computer interface research to improve quality of life for individuals with cerebral palsy.

Medical Highlights

- Continued research into umbilical cord blood therapies.
- Smarter robotic rehabilitation devices.
- Brain-computer interface studies for therapy.
- Earlier diagnosis enabling earlier intervention.

Community Spotlight

The 2026 Early Cerebral Palsy Health Summit brings together researchers, clinicians, therapists, and families to discuss innovation and collaboration.

Success Story

Manvendra Singh, who lives with cerebral palsy, excelled academically and achieved success in competitive engineering examinations, inspiring others worldwide.
